

Technology Transfer

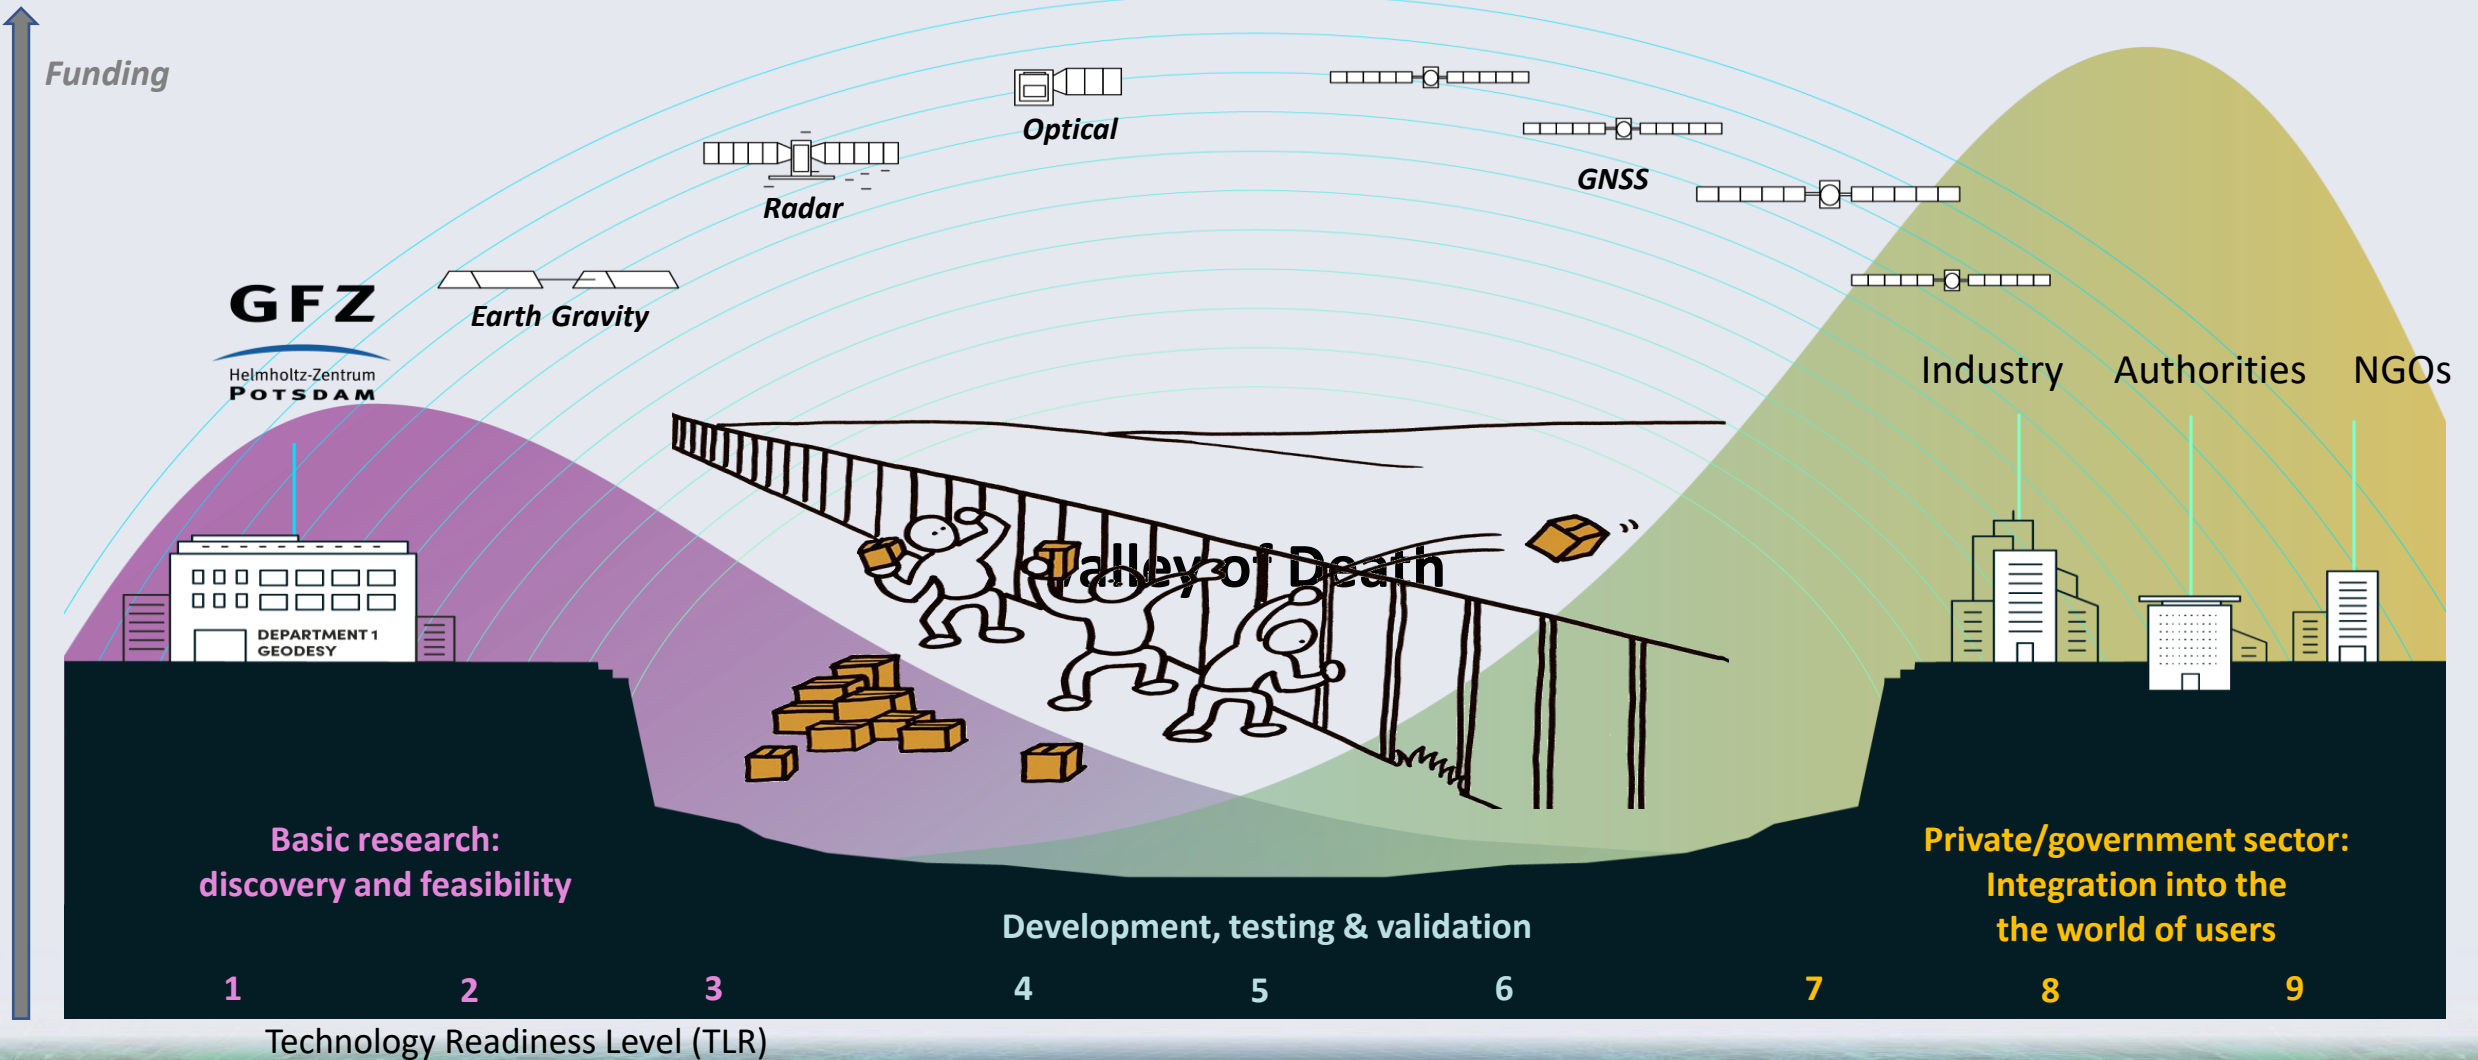

From science to market and society

Lessons learned

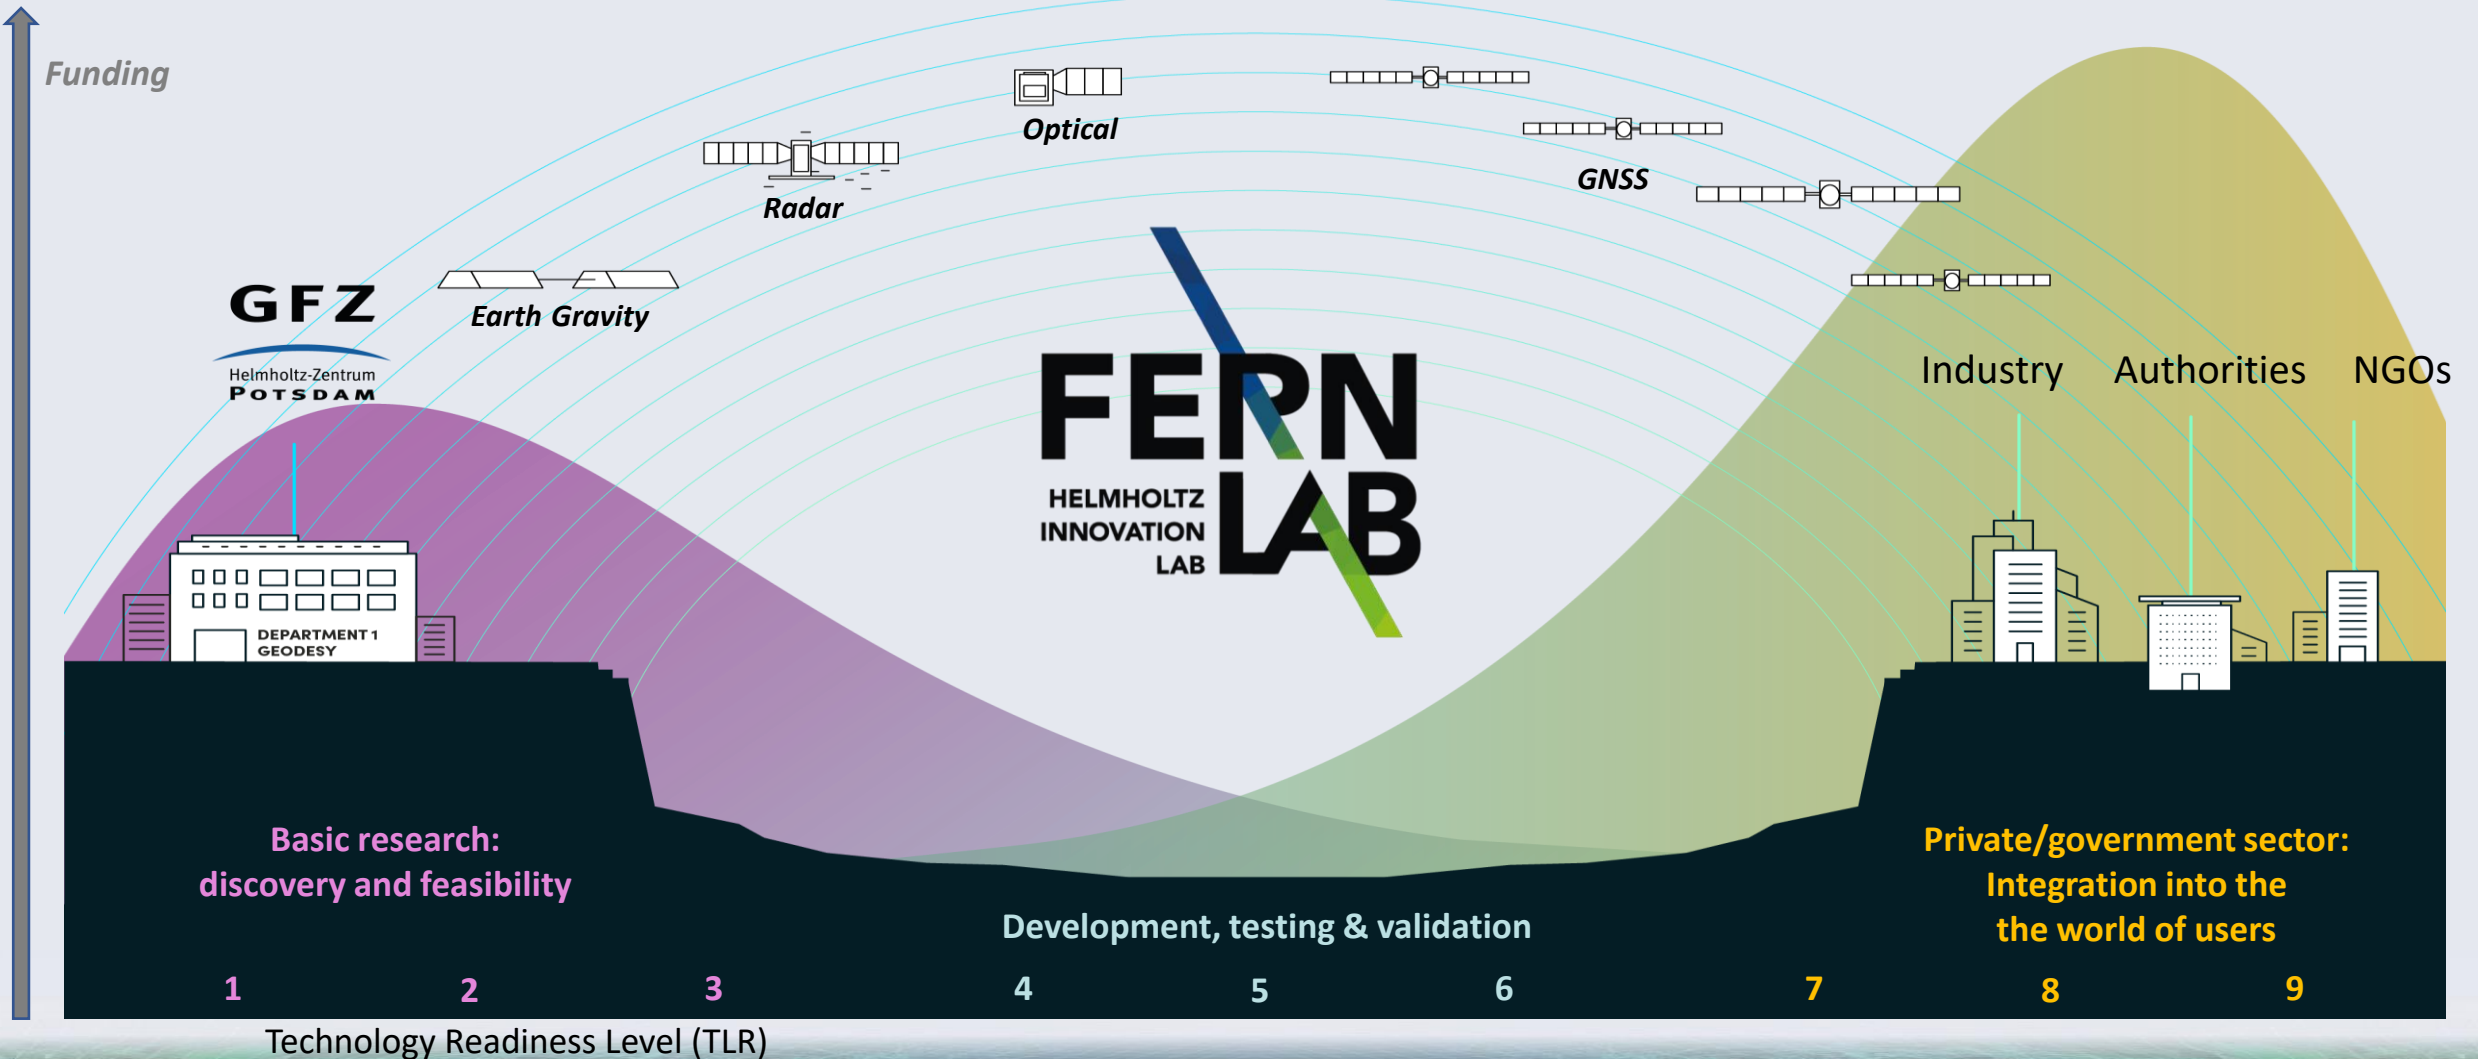

Daniel Spengler, Julia Neelmeijer, Alison L. Beamish, Robert Behling, Romulo Goncalves, André Lingenfeller, Arash Madadi, Daniela Rabe, Daniel Scheffler, Maria Thiele

Department of Geodesy, Section of Remote Sensing and Geoinformatics
Helmholtz Centre Potsdam – German Centre for Geosciences (GFZ)

Transfer in remote sensing – the status

Transfer in remote sensing – the chance

Aim of FERN.Lab - increase of TT activities

- bring promising remote-sensing related methods into use
-> increase knowledge and technology transfer activities at GFZ Dept. 1
- joint effort with TT: support establishing a transfer culture at GFZ
- establishment of know-how for sustainable software development
- blueprint for successful technology transfer at GFZ and other research institutions in the field of geodata (e.g. interest by DLR)

Accomplished to date:

- successful transfer projects with external partners!
- contribution to transfer strategy of GFZ - link to POF IV goals
- 1 scientific publication on the strategy of the Innovation Lab FERN.Lab
- point of contact for software distributions questions from scientists

Transferstrategie des GFZ

Weiterentwicklung des Wissens- und Technologietransfers 2021–2025

BEITRAG DES GFZ ZUR HELMHOLTZ-TRANSFERSTRATEGIE
Stand: November 2021

Instrument: Etablierung der Helmholtz Innovation Labs und Ausbau von weiteren Kooperations-Plattformen zu anwendungs-relevanten Themen

→ **Maßnahmen:** Etablierung der beiden Innovation Labs bis 2025, anwendungsgetriebene Hard- und Softwareentwicklung sowie Services, Optimierung der internen Prozesse, Geschäfts- und Transfermodelle und Kundenbeziehungen, Übertragung auf weitere anwendungsnahe Plattformen ggf. im Rahmen von Wegbereiter-Projekten

Remote Sensing Applications: Society and Environment

Volume 24, November 2021, 100641

FERN.Lab: Bridging the gap between remote sensing academic research and society

Alison L. Beamish  , Lasse Anbuhl, Robert Behling, Romulo Goncalves, André Lingenfeller, Julia Neelmeijer, Daniela Rabe, Daniel Scheffler, Maria Thiele, Daniel Spengler

FERN.Lab vision and aim

	European Union (EU27)				Global	
	2021		2031		2021	2031
	Value	%	Value	%	Value	Value
Data revenues (€ m)	82	15.4	117	14.6	536	797
Value-added service revenues (€ m)	342	15.3	664	14.2	2,236	4,662

EO and GNSS Market Report, 2022

IDENTIFY & COLLECT

Selection of sensor and data for specific applications

COMBINE & PROCESS

Data processing and combination

ANALYSE & TEST

Method development and validation

IMPLEMENT & APPLY

Operationalisation and valorisation

A perspective on benefits

Combination of technology- und knowledge transfer into industry, politics & society
= commercial + non-commercial transfer in the field of remote sensing

commercialization
potential

social impact

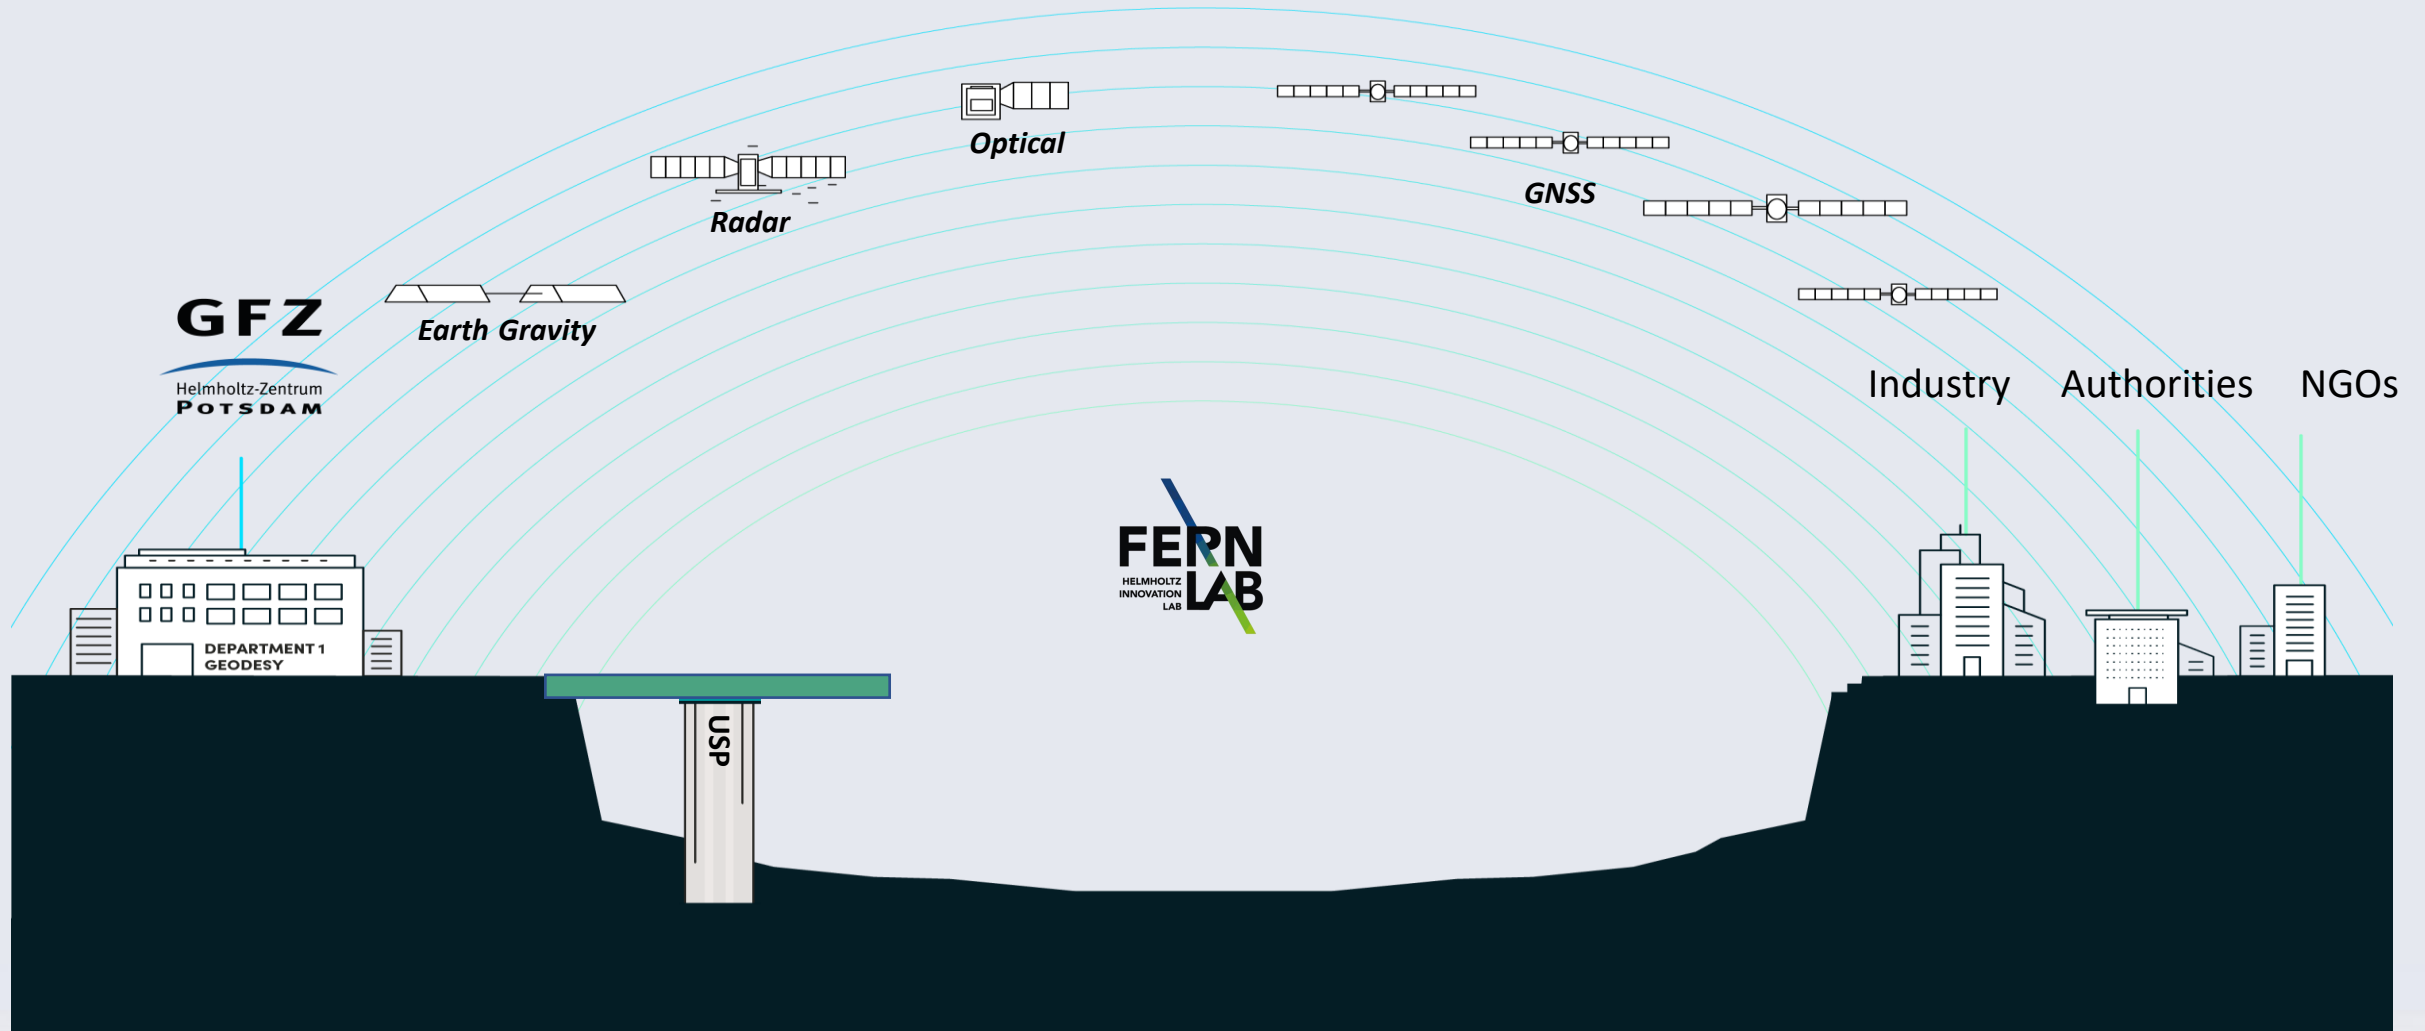

local scale

global scale

Building the bridge – requires pillars

Definition of FERN.Lab USP

- Based on technology screening → diamond selection!
 - >70 technologies at GFZ Department Geodesy
 - Hyperspectral data processing and analysis
 - Earth Gravity data processing and analysis
 - Data processing, homogenization, multisensoral analysis
 - Topic specific data analysis (e.g. habitat mapping)

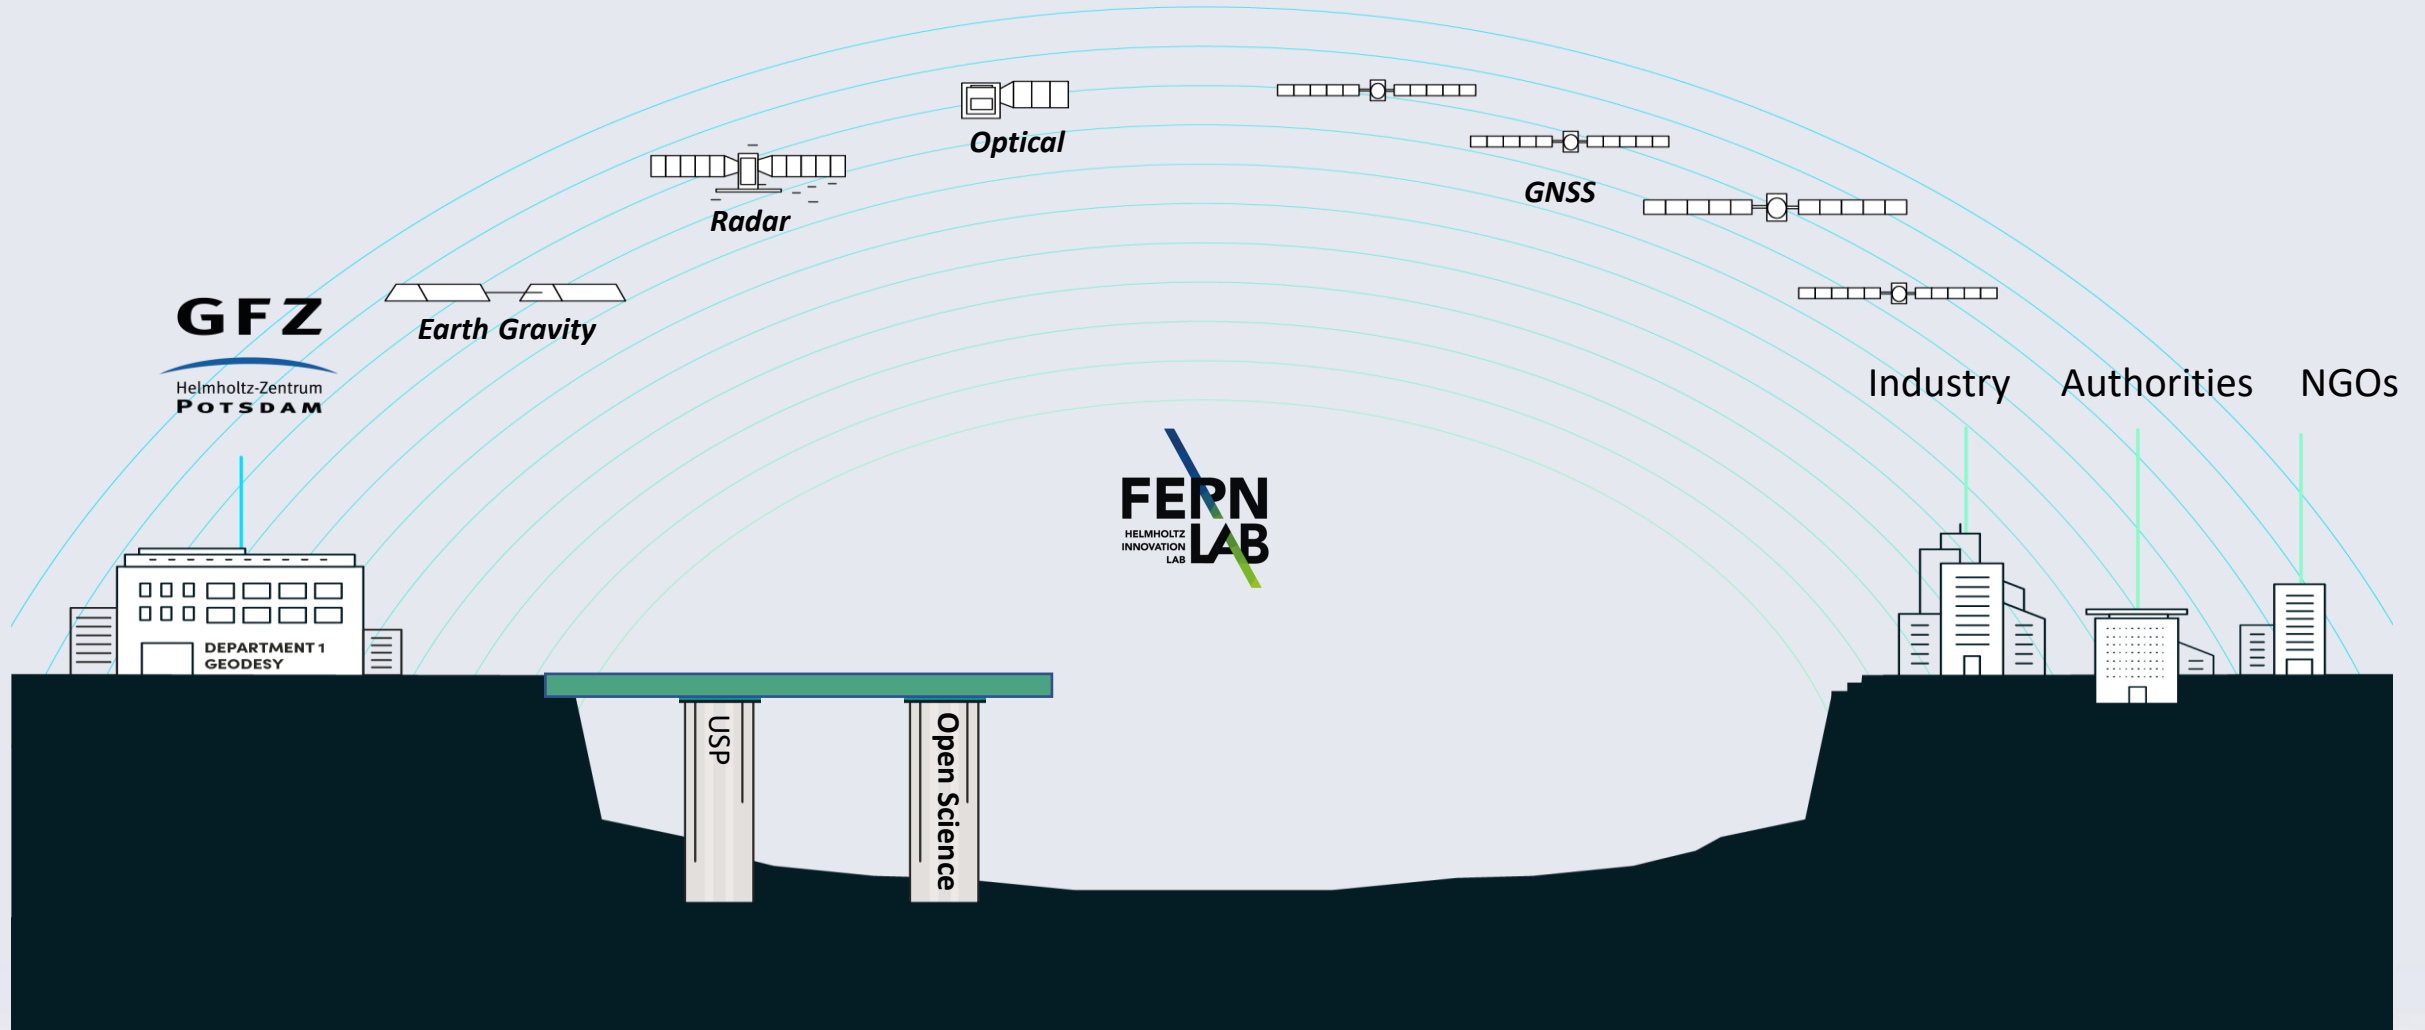

Open questions to answer

- Finding place at market....
- What is required by the market? Market needs?
 - High quality analysis ready data
 - custom made solutions
 - ...

Unexpected long process!

Building the bridge – FERN.Lab lessons learned

Open Science

- Germany [Helmholtz Association of Research Centers] is pushing Open Science
- Benefits for scientist, following open science objectives
 - Visibility
 - Increasing impact of research
 - Increasing network
- Technology Transfer requires a change of the scientist's mindset!
→ Commercial use does not have to be in contrast to Open Science

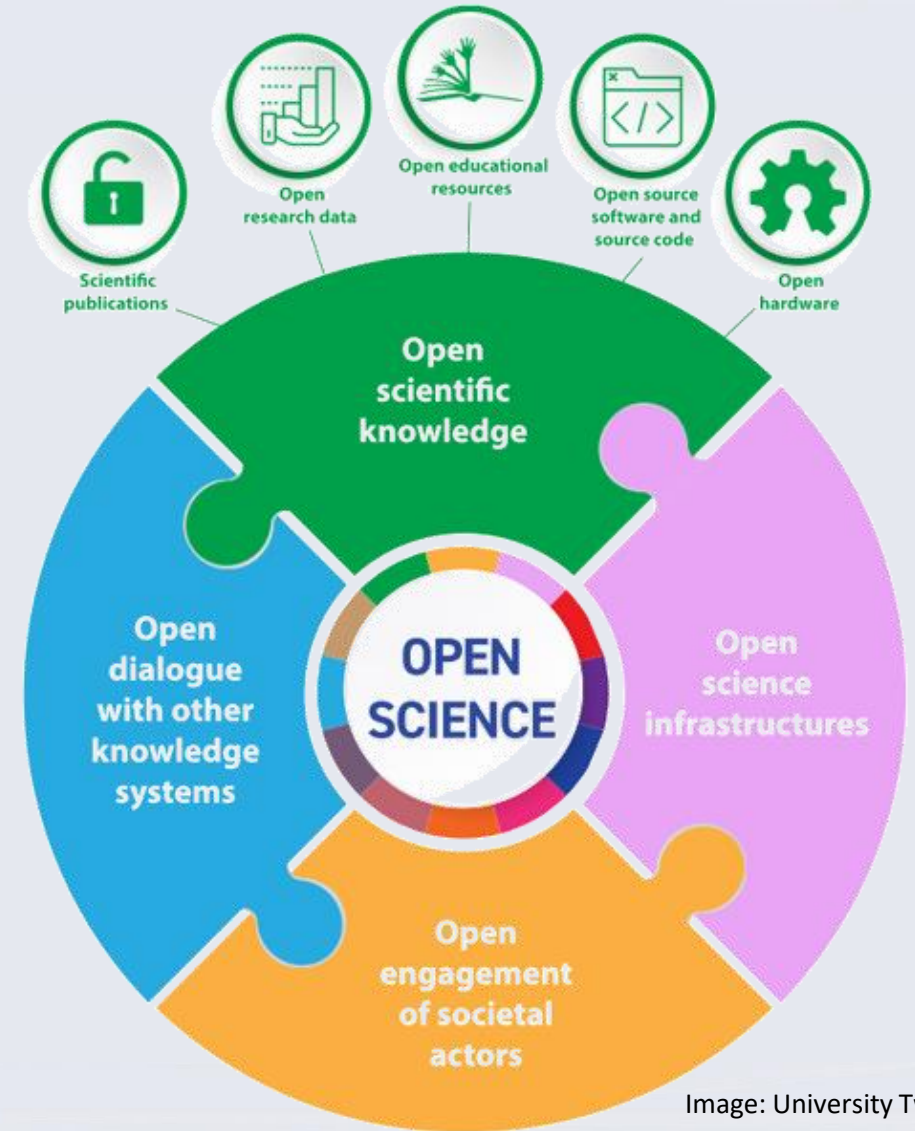

Image: University Twente

Building Transfer on Open Science

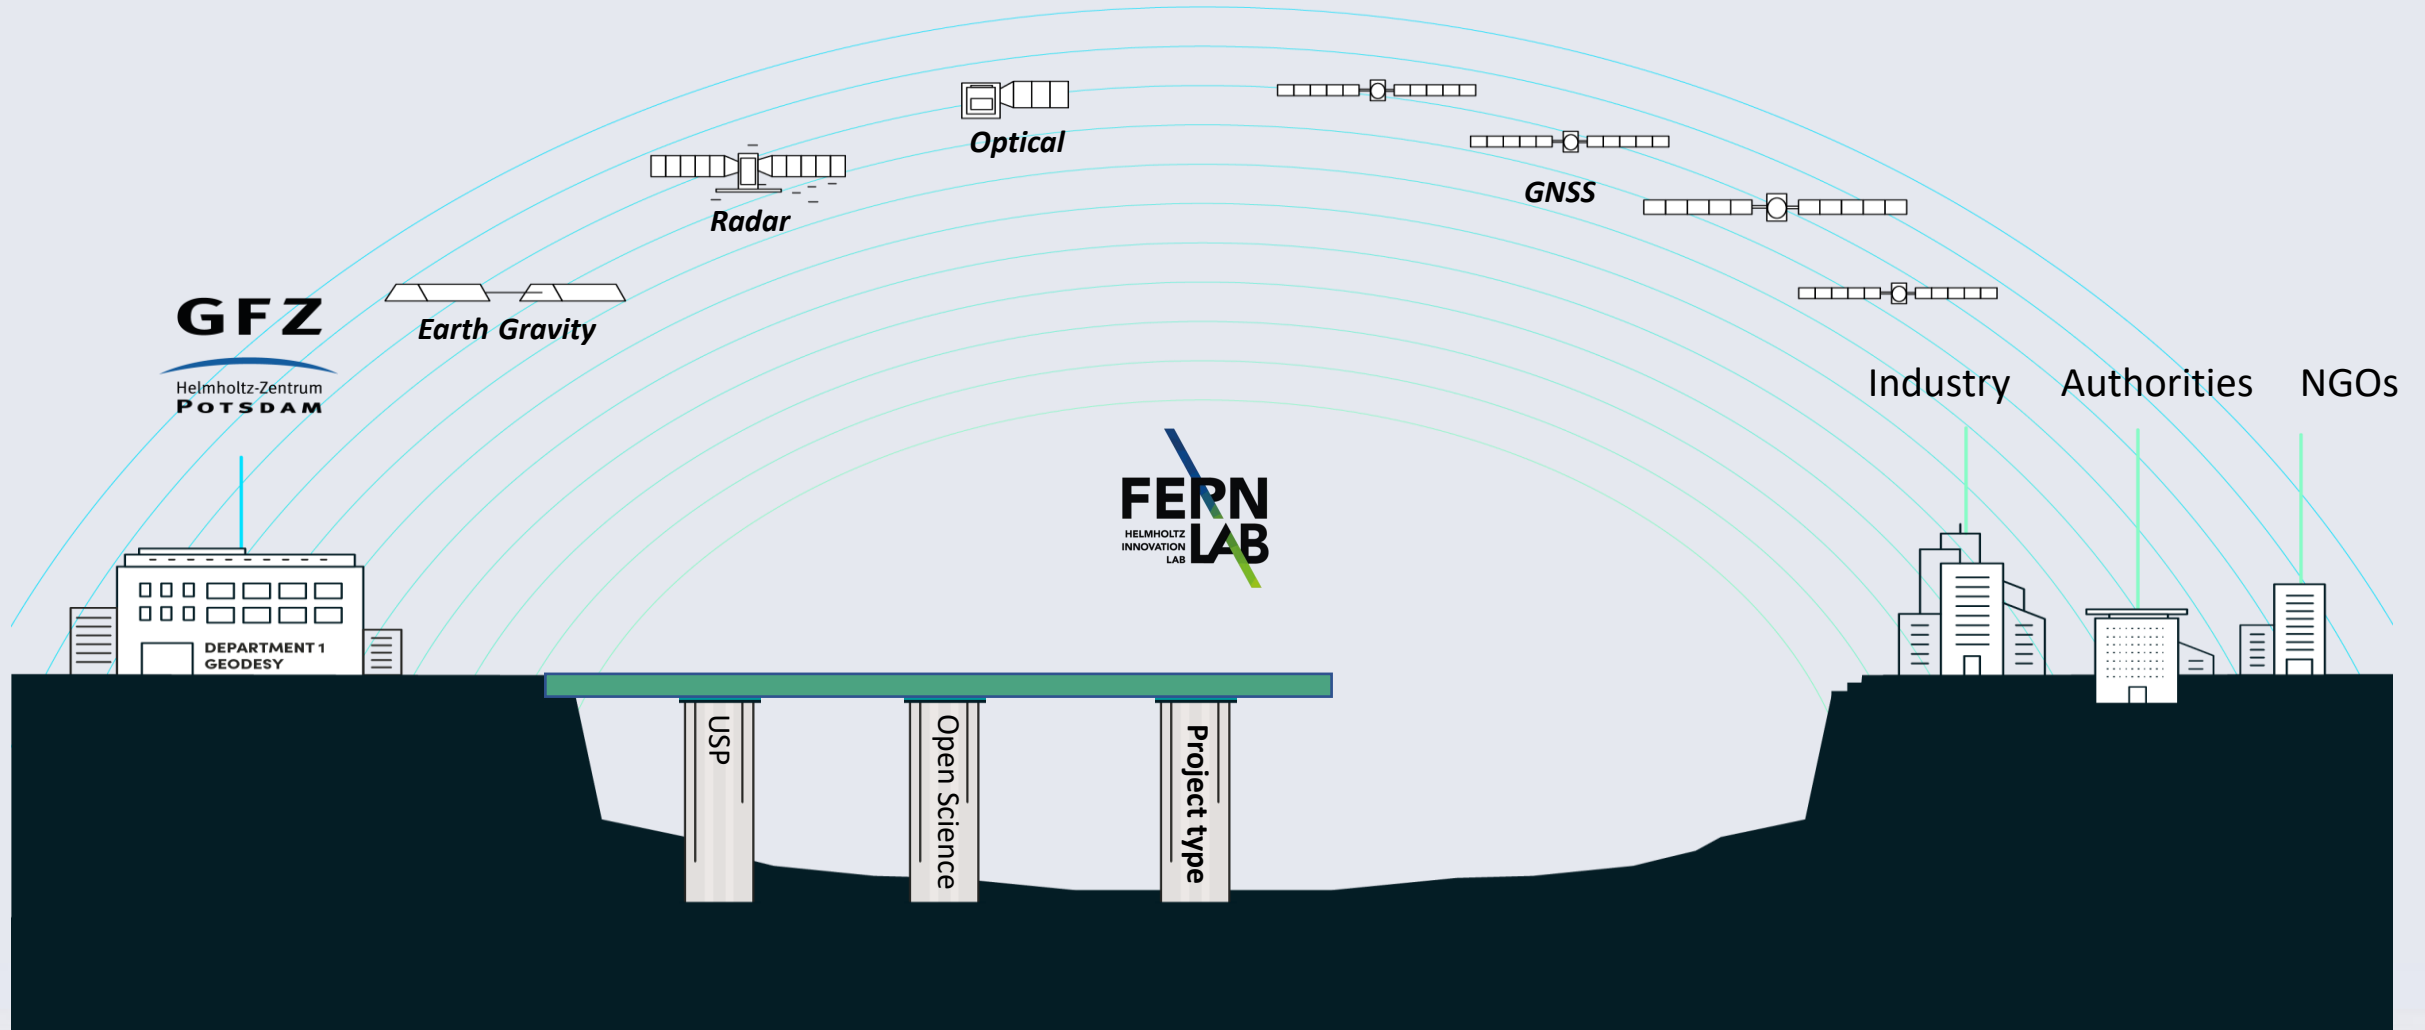

- Open Source Version
- e.g. EUPL, GPLv3 Licenses
- With copyleft

- Collaboration with scientist

Software Sustainability

- Commercialisation:
- Dual Licencing
 - Software Patenting
- Addons:
- E.g. UI, API, advanced feature, customization

Building the bridge – FERN.Lab lessons learned

USP

Open Science

Project type

Project types

In-house developments

Time investment: 40%

Aim: increase TRL Level of GFZ methods, bridge the gap to operational use

Focus:

- technology + knowledge transfer of existing open source solutions
- testing different TT paths
- **High internal need**

R&D 3rd party

Time investment: 35%

Aim: work jointly with potential end-users on product development

Focus:

- transfer-focused 3rd projects finance via ZIM network/ other 3rd party calls
- revenues via license/sell software/IP
- **Strong request by German SMEs**

Contract research

Time investment: 10%

Aim: develop product for customer

Focus:

- direct payment for developing work
- revenues via license/sell software/IP
- **Lower request compared to expectation**
→ long negotiation processes

Honest Broker / Internal Support

Time investment: 15%

Aim: support of GFZ scientists -> raise awareness of TT topic

Consulting externals

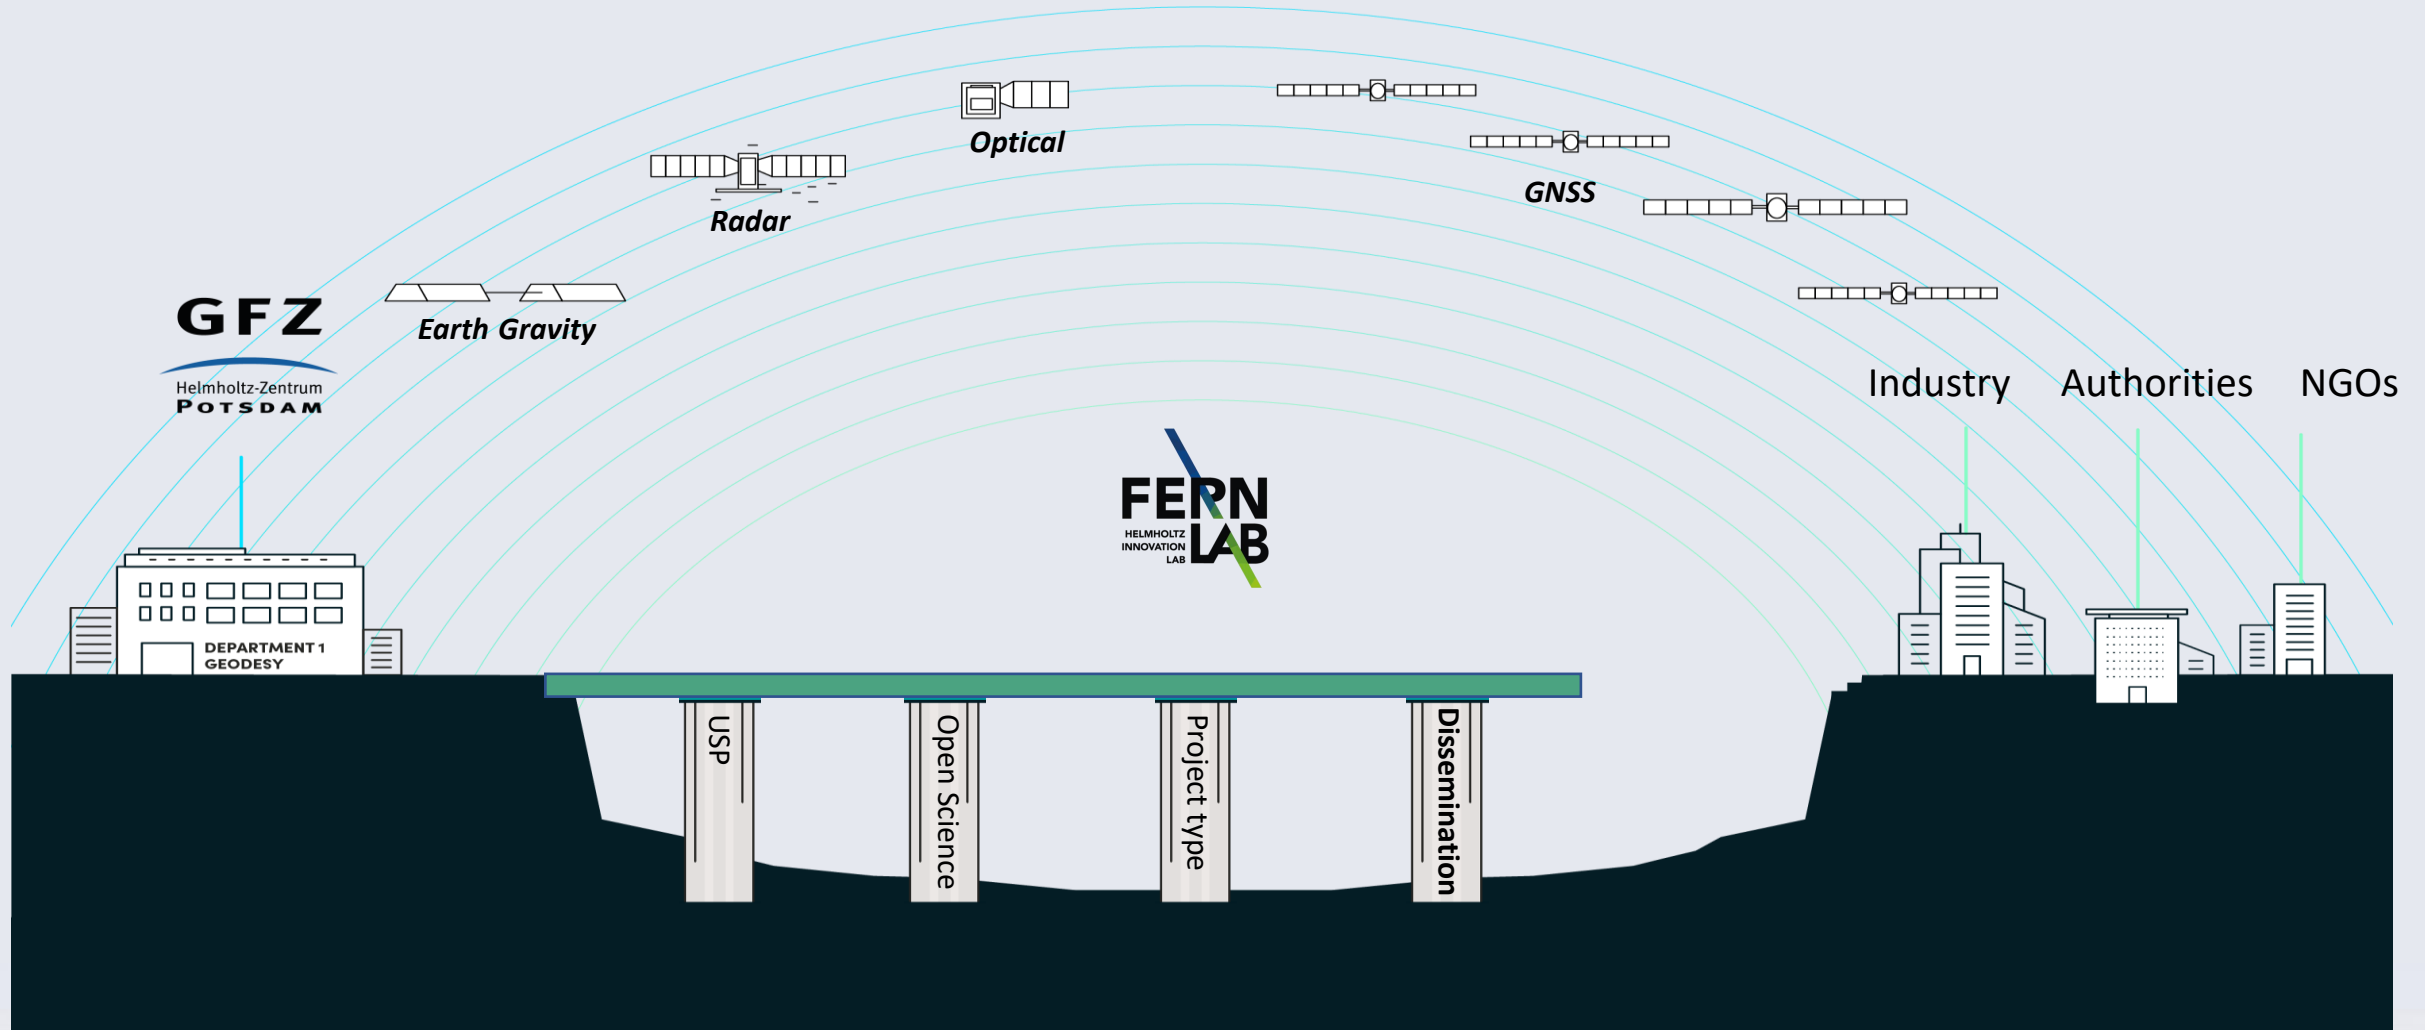

Focus:

- support proposals/ workshops
- counselling (licenses, tenders, spin-off founding)
- improve GFZ-intern processes

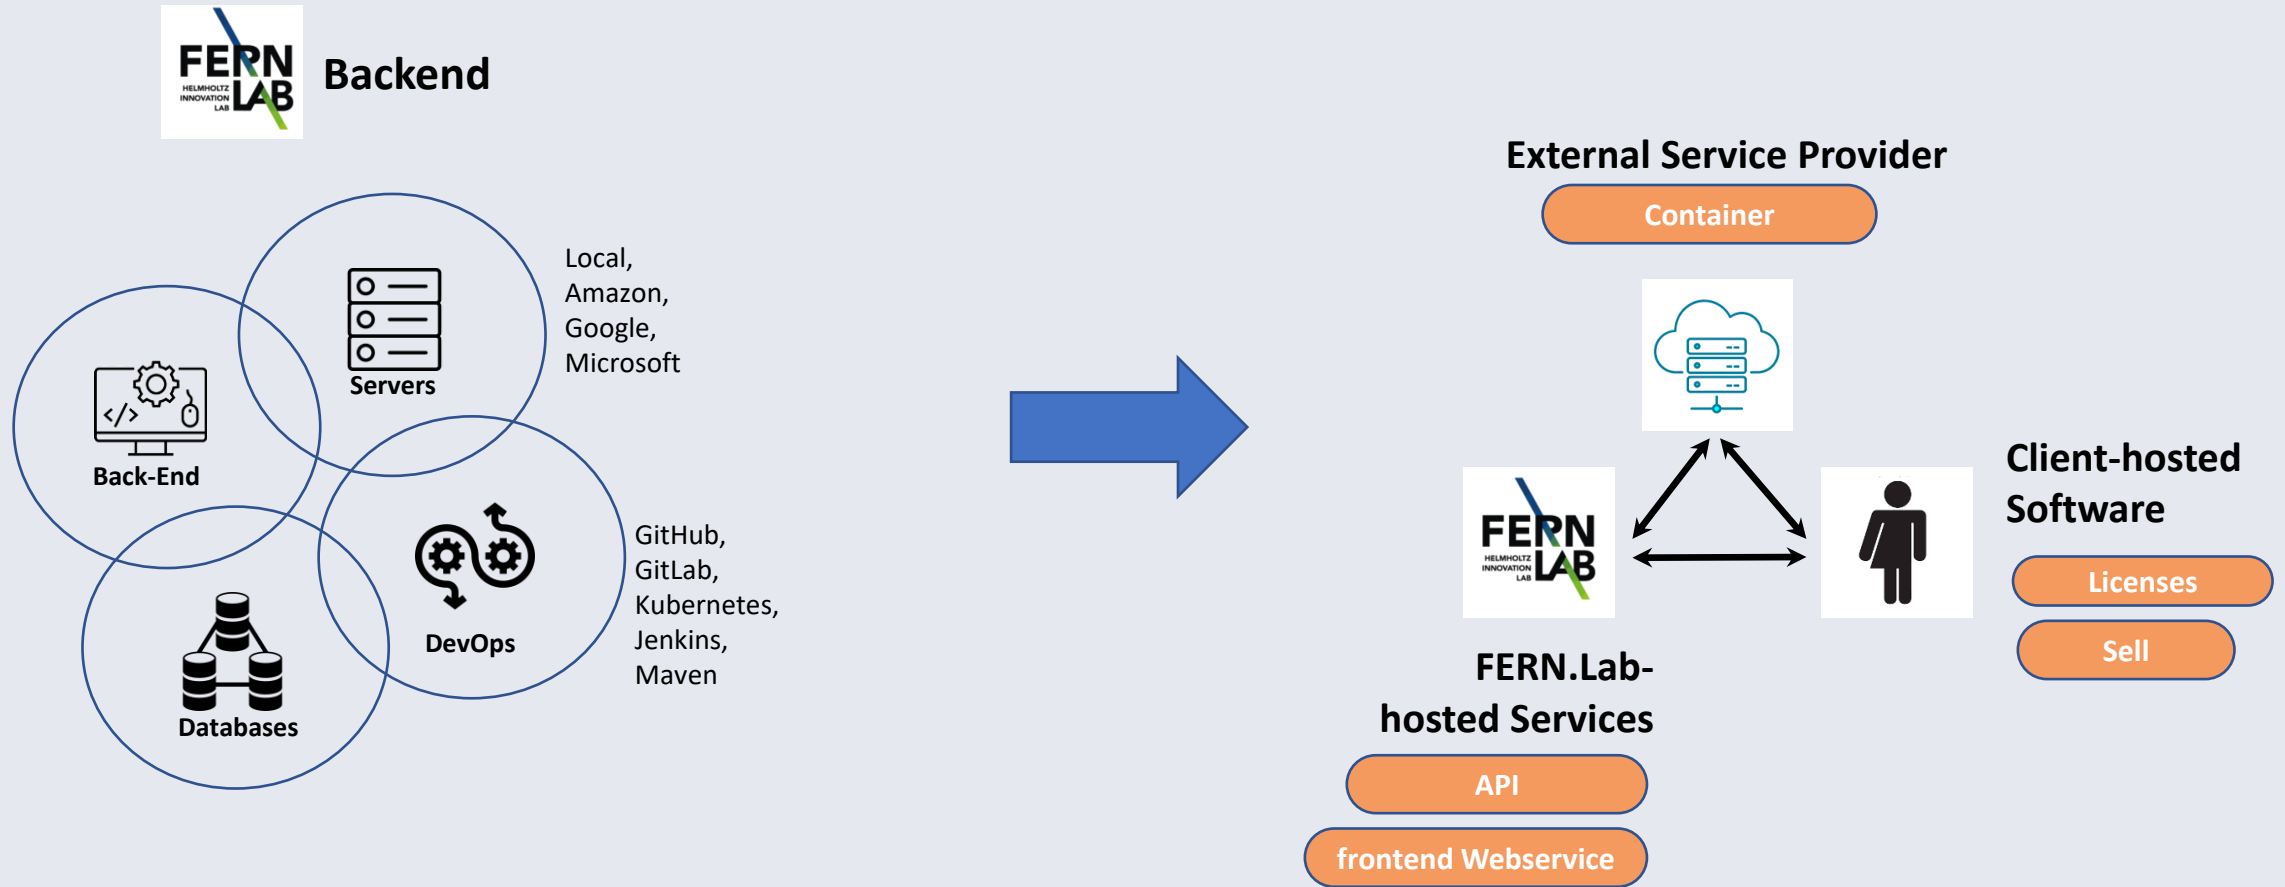

Evaluation of project types

- Rating required time and revenue (financial, but also non commercial e.g. visibility, new cooperations)
→ criterias for sucessful transfer are required

Building the bridge – FERN.Lab lessons learned

Dissemination

Full Stack Service Development – Minimal Sampling Classifier

Based on Open Research Software Development Habitat Sampler (C. Neumann)

The image is a composite of several elements related to the Minimal Sampling Classifier project:

- Frontend development workflow:** A flowchart on the left showing the process from 'Step 1 Load Reference Data' (using Shapefile or tablefile) to 'Step 2 Load image data' (using local or use gts2) to 'draw points'.
- Development of webinterface for classification including expert knowledge:** A screenshot of the web interface showing a 'Classification View' with settings for 'Initial Number of Samples' (70), 'Initial Number of Models' (300), 'Machine Learning Algorithm' (Random Forest), 'Sample Type' (Regular), and a 'Threshold' slider.
- Classification results, export Options:** A screenshot of a map showing a classified area with various colors representing different land cover types.
- Optional statistical analysis:** A pie chart titled 'Plots' showing the distribution of land cover types: heath_shrub, deciduous, heath_young, other, heath_old, coniferous, bare_ground, and xeric_grass.
- MISA logo:** A logo with the text 'MISA' and a stylized 'C' symbol.

Launch planned for Q4/2022

Evaluation of external platforms for hosting in process

API on Cloud Infrastructure

Licensing in progress!

FINDR:
02/21-06/23

- EU 3rd party project: ConstellR (D), Cyphronet (PL), eLeaf (NL)
- Build a central platform for data from all satellite data providers (currently: multispectral data, planned also for thermal, hyperspec.)
- Download including automated data harmonisation for multispectral data sets
- Contribution to FERN.Lab method building kit

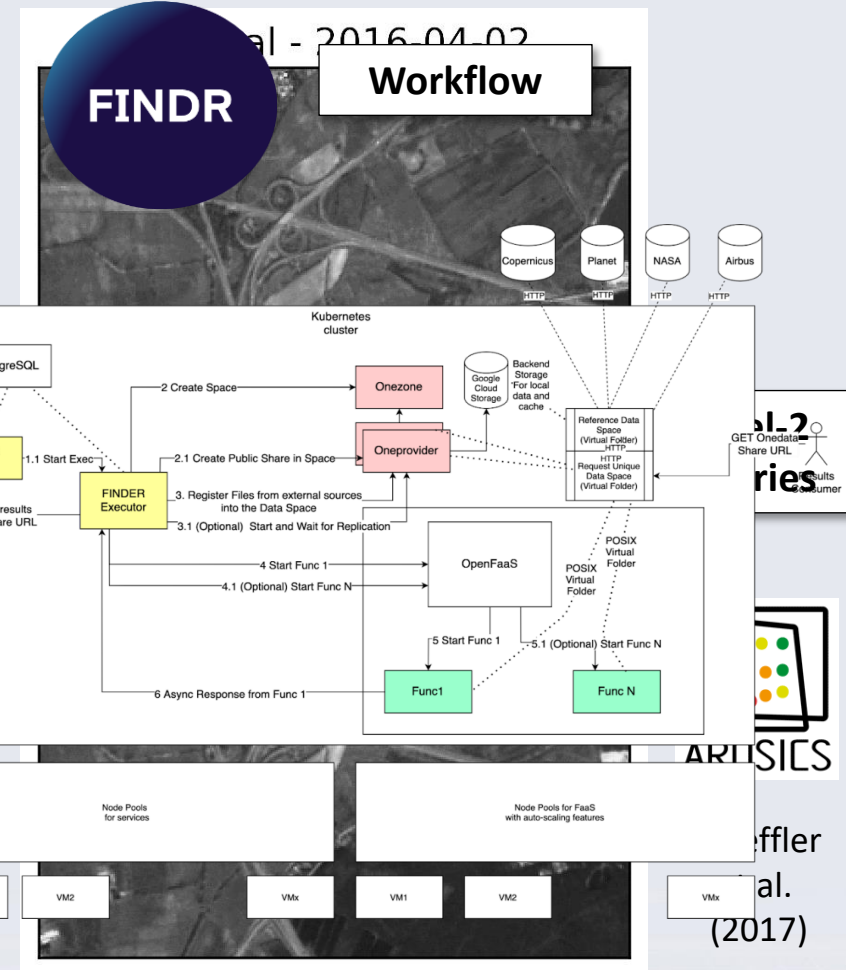

Data provider

Easy Data Access via FINDR
homogenisation of
multisensor data

Data user

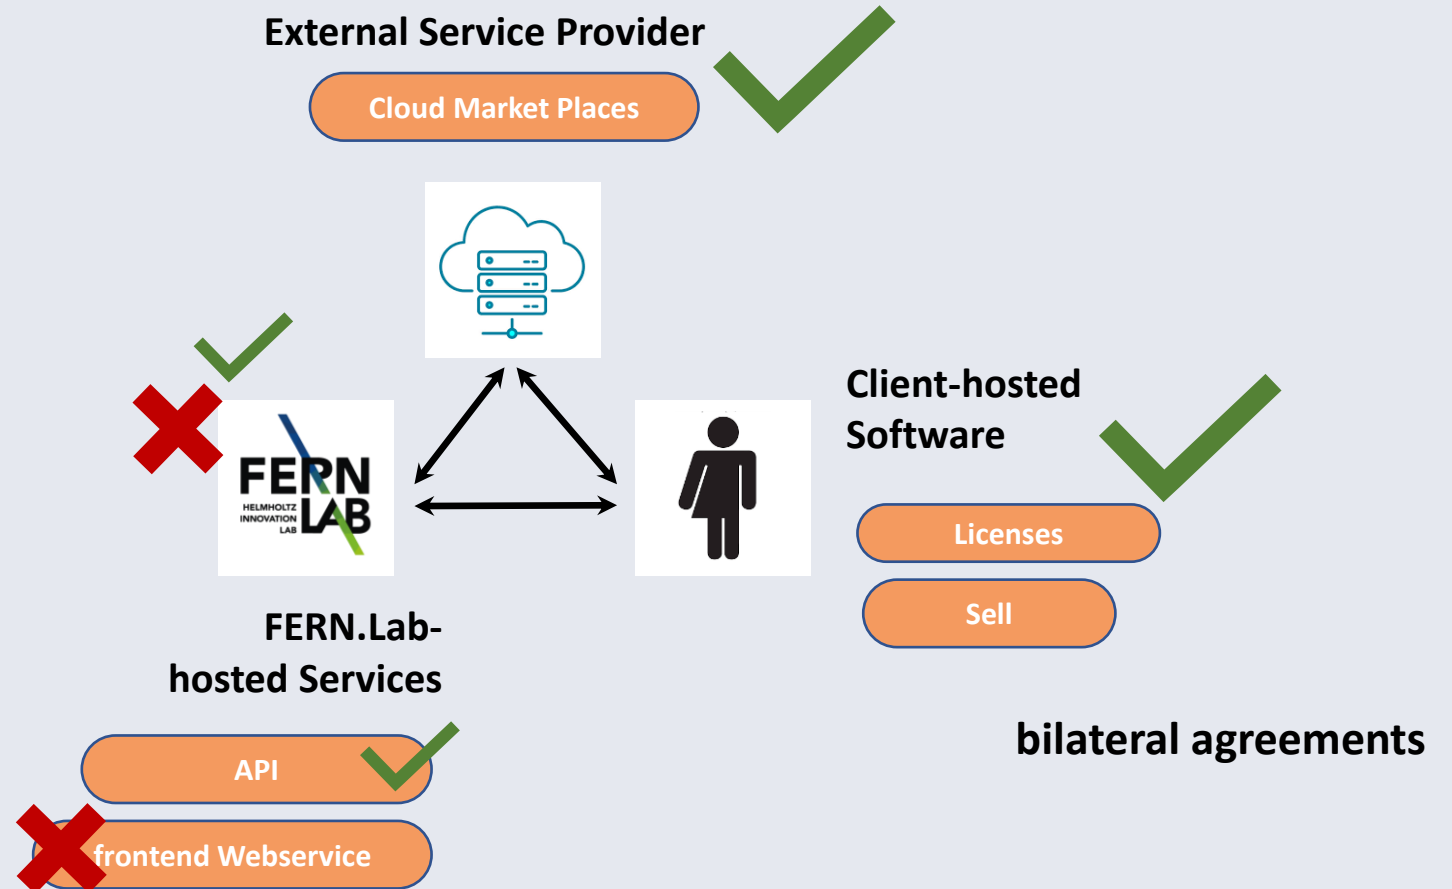

Dissemination

Increasing options of EO marketplaces

no self-hosted FERN.Lab services!

- Full Stack Development required
- User management incl. payment required
- Potential high effort for maintenance
- End customer market not foreseen in FERN.Lab strategy

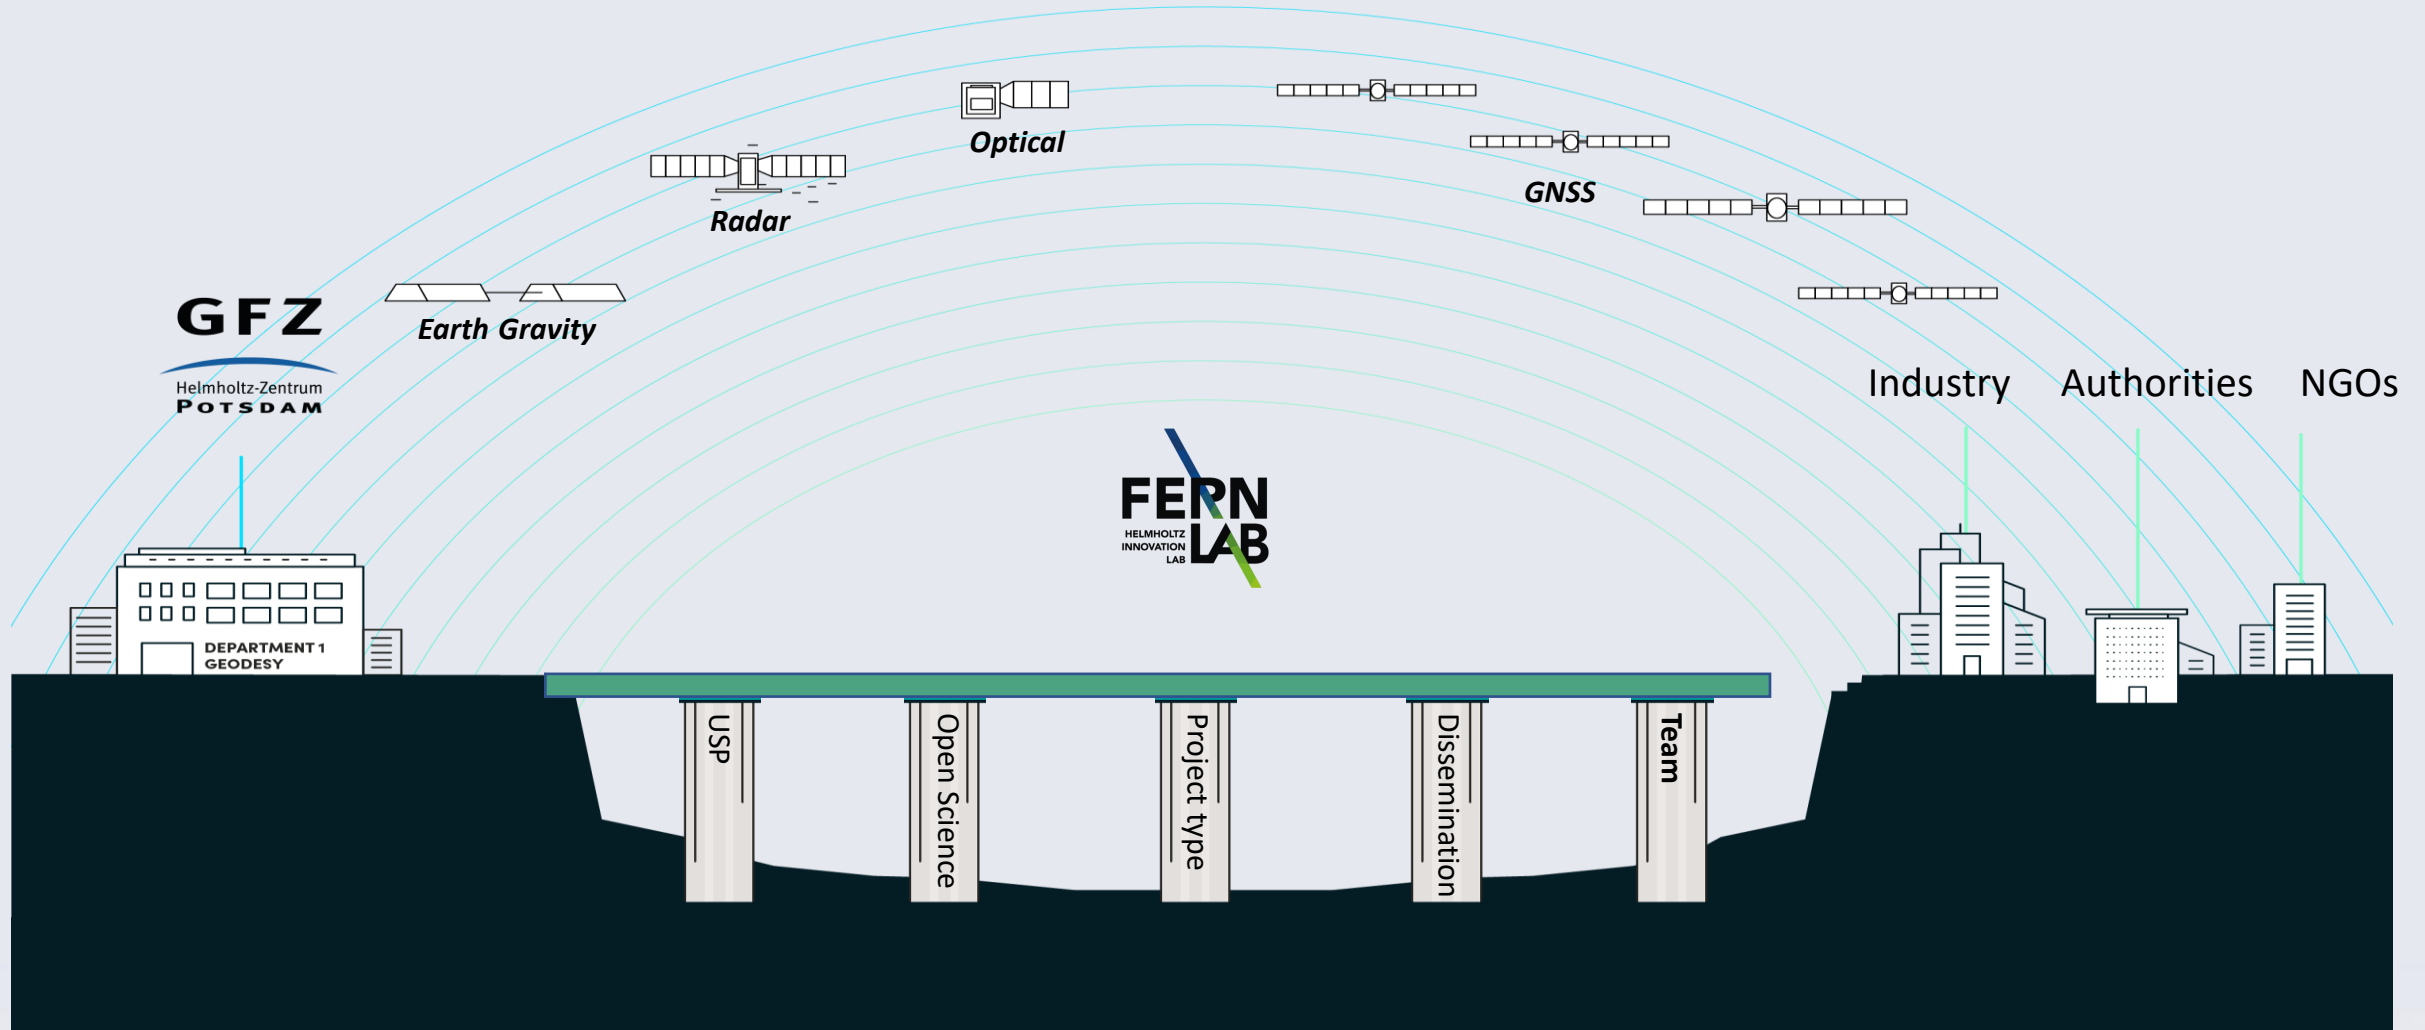

Outreach

- Website
- Corporate Design

- Social Media

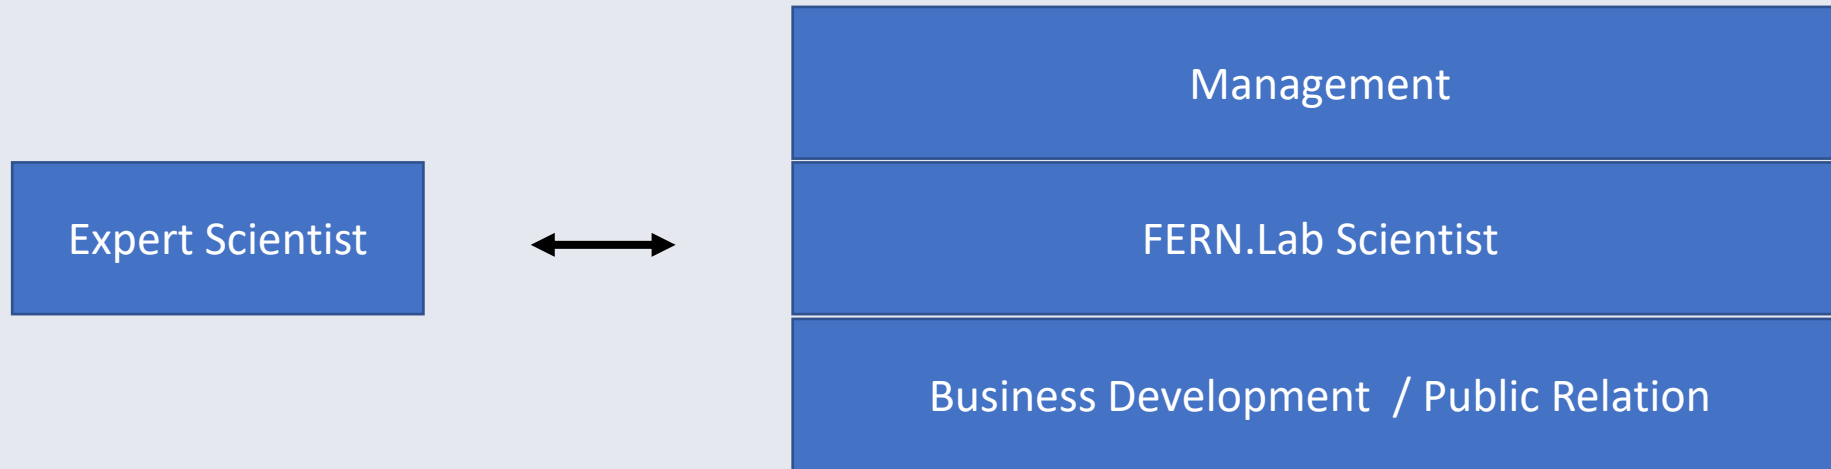

Building the bridge – FERN.Lab lessons learned

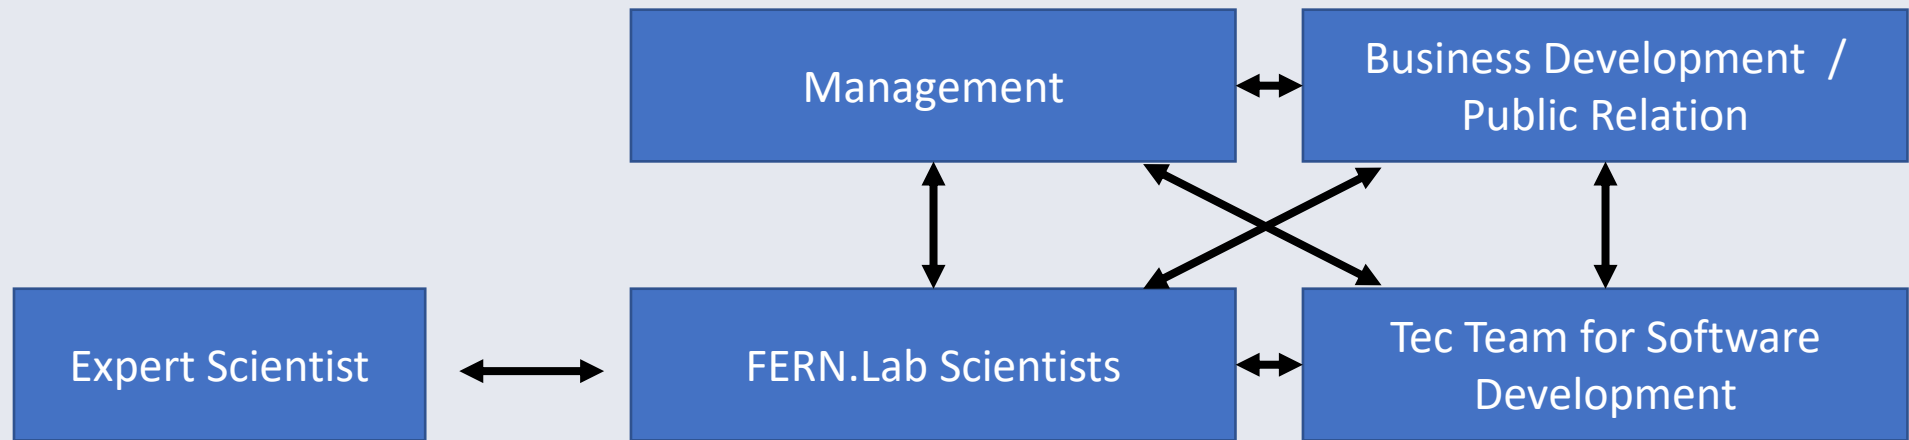

Team skills for transfer of earth observation methods

- Multidisciplinary team (proposal idea)

Required team skills for successful technology transfer for earth observation methods

Agile working processes established

No one works on single projects!!!

FERN.Lab – Interdisciplinary Team - close to science!

FERN.Lab - Bridges the Innovation Valley, Key Messages

For success you need!

- Clear USP
- Technology and Knowledge Transfer based on Open Science
- Different types of cooperation options
- Different types of dissemination options
- Multidisciplinary team
- Time and support of your organisation
